

## **Pizza Sales Report - Project Requirement (SQL +Power BI)**

### **Problem Statement:**

You are a data analyst for a Pizza company that is looking to gain insights on the past year performance. Your task is to analyze the following metrics and create a Dashboard that clearly highlights the requirements below. Complete the project using SQL and Power BI.

### **KPI Requirement**

We will analyze key indicators for our pizza sales data to gain insights into our business performance. Specifically, we want to calculate the following metrics:

- Total Revenue – The sum of the total price of all pizza orders
- Average Order Value – The average amount spent per order, calculated by dividing the total revenue by the total number of orders
- Total Pizzas Sold – The sum of the quantities of all pizzas sold
- Total Orders – The total number of orders placed.
- Average Pizzas Per Order - The average number of pizzas sold per order, calculated by dividing the total number of pizzas sold by the total number of orders.

### **Charts Requirement**

We would like to visualize various aspects of our pizza sales data to gain insights and understand key trends. We have identified the following requirements for creating charts:

- Daily Trend for Total Orders – Create a bar chart that displays the daily trend of total orders over a specific time period. This chart will help us identify any patterns or fluctuations in the order volumes on a daily basis
- Monthly Trend for Total Orders – Create a line chart that illustrates the hourly trend of total orders throughout the day. This chart will allow us to identify peak hours or periods of high order activity.
- Percentage of Sales by Pizza Category – Create a pie chart that shows the distribution of sales across different pizza categories. This chart will provide insights into the popularity of various pizza categories and their contribution to overall sales.
- Percentage of Sales by Pizza Size – Generate a pie chart that represents the percentage of sales attributed to different pizza sizes. This chart will help us understand customer preferences for pizza sizes and their impact on sales.
- Total Pizzas Sold by Pizza Category – Create a funnel chart that presents the total number of pizzas sold for each pizza category. This chart will allow us to compare the sales performance of different pizza categories.

- Top 5 Best Sellers by Revenue, Total Quantity, and Total Orders – Create a bar chart highlighting the top 5 best-selling pizzas based on the Revenue, Total Quantity, Total Orders. This chart will help us identify the most popular pizza options
- Bottom 5 Sellers by Revenue, Total Quantity, and Total Orders – Create a bar chart showcasing the bottom 5 worst selling pizzas based on the Revenue, Total Quantity, and Total Orders. This chart will enable us to identify underperforming or less popular pizza options.
- Top 5 pizza by quantity - Create a bar chart showcasing Top 5 pizza by quantity.
- Bottom 5 pizza by quantity - Create a bar chart showcasing bottom 5 pizza by quantity.
- Top 5 pizza by total order - Create a bar chart showcasing Top 5 pizza by total order.
- Bottom 5 pizza by total order - Create a bar chart showcasing bottom 5 pizza by total order.

**Conclusion:**

By analyzing pizza sales report, the business can gain a comprehensive understanding of sales performance and customer purchasing behavior. These insights allow for data-driven decisions such as optimizing staffing during identified peak hours, focusing marketing efforts on high-performing pizza categories, and refining the menu based on size preferences and categories. Ultimately, this analysis transforms raw transactional data into a strategic roadmap to maximize revenue and improve overall operational efficiency.
